# Audio

Make audio-related settings.

## Filter

This unit is equipped with a sound quality adjusting function which allows users to enjoy the desired playback sound quality. The unit supports PCM signal.

### Filter 1 (Default):

Offers a short impulse response for both pre-echo and post-echo. Suitable for large-information content audio. Produces a deep sound image with clearly-defined positional relationships of the audio sources.

### Filter 2:

This characteristic is known as asymmetrical impulse response. The post echo is slightly longer than the pre-echo. The sound characteristics is more analog like.

## Lock Range

Narrowing down the “Lock Range” setting reduces jittering, providing clearer sound. However, narrowing down the “Lock Range” too much can cause noise or interruption of the sound during playback or when changing to a song of a different sampling frequency. In this case, broaden the “Lock Range” setting while listening to music until the music sounds normal.

### Narrow / Medium / Wide

- The factory default setting for “Lock Range” differs depending on the input source. Below are the factory default settings for each input source.

Default	Input source
Narrow	CD
Wide	Network playback / USB memory playback (USB-A) / Bluetooth / USB-DAC / Coaxial / Optical 1 / Optical 2

- A separate “Lock Range” setting is recorded for each input source, except for Network playback, USB memory and Bluetooth, which have a common setting.

## Variable Out

You can stop the circuit that outputs audio from the analog audio output terminals (VARIABLE) of this unit. This prevents the audio signal output from the analog audio output terminals (FIXED) from being affected. If you will not use the analog audio output terminals (VARIABLE), turning this setting off enables a higher quality of sound.

**On**  
(Default): Enables variable audio output.

**Off:** Disables variable audio output.

## Volume Limit

Make a setting for the maximum volume of the audio signal output from the analog audio output terminals (VARIABLE).

**Off**  
(Default): Do not set a maximum volume.

**95 (+1dB) / 90 (-4dB) / 85 (-9dB) / 80 (-14dB)**

## Digital Out

Stopping digital audio output reduces a source of noise that affects sound quality, enabling higher sound quality playback.

**On**  
(Default): Digital audio output is enabled.

**Off:** Digital audio output is disabled.

- The "DIG. OUT OFF" indicator lights on the display when this setting is set to "Off".

## Phones

The headphones circuit operation can be stopped to minimize noise from the headphones circuit which could interfere with the analog audio output signal.

**On**  
(Default): Enable the headphones output.

**Off:** Disable the headphones output.

- When not using headphones, you can enjoy higher quality sound with Off mode.

## H/P Amplifier Gain

Set the gain of the headphone amplifier. Set this according to the impedance of the connected headphones. It is recommended that this is set on the “Low” side if the headphones have low impedance and on the “High” side if they have high impedance.

<b>High:</b>	Set the gain of the headphone amplifier to “High”. Set when there is insufficient volume, even when the gain setting is “Mid”.
<b>Mid (Default):</b>	Set the gain of the headphone amplifier to “Mid”.
<b>Low:</b>	Set the gain of the headphone amplifier to “Low”. Set if the volume is too high when the gain setting is “Mid”.

### NOTE

- The headphone volume varies depending on the H/P Amplifier Gain setting. Decrease the volume or mute the audio first if changing this setting while listening to audio.

## Switching the function of the volume buttons on the remote control

If connecting a power amplifier to the analog audio output terminals (VARIABLE) of this unit, you can change the operation mode of the included remote control so that the volume of the power amplifier can be adjusted from this unit. There are two remote control operation modes: amplifier operation mode and network CD player operation mode. Amplifier operation mode adjusts the volume of a Marantz amplifier and network CD player operation mode adjusts the volume of the audio signal output from the analog audio output terminals (VARIABLE) of this unit. The factory default setting for the remote control operation mode is the amplifier operation mode.

- Be sure to check the operation of each unit after setting the remote control operation modes.
- Switch between the remote control operation mode settings by pressing the VOLUME  $\blacktriangle$   $\blacktriangledown$  and MUTE  $\text{M}$  buttons.

## Setting the remote control operation mode to network CD player operation mode

- 1 Press and hold the ENTER and number 1 button on the remote control unit down together for more than 5 seconds.**

- “Variable Out” in the menu must also be set to “On” to adjust the volume of the audio signal output from the analog audio output connectors (VARIABLE). (☞ p.101)

## Setting the remote control operation mode to amplifier operation mode

- 1 Press and hold the ENTER and number 2 button on the remote control unit down together for more than 5 seconds.**

- The remote control operation modes returns to the default settings when the batteries are removed. Set the remote control operation modes again after replacing the batteries.

### ■ Audio

#### Apple Lossless Audio Codec

This is a codec for lossless audio compression method developed by Apple Inc. This codec can be played back on iTunes, iPod or iPhone. Data compressed to approximately 60 – 70 % can be decompressed to exactly the same original data.

#### DSD (Direct-Stream Digital)

One of the audio data recording methods, it is the signal aspect used to store audio signals on a super audio CD, and is  $\Delta$ - $\Sigma$  modulated digital audio.

#### FLAC (Free Lossless Audio Codec)

FLAC stands for Free lossless Audio Codec, and is a lossless free audio file format. Lossless means that the audio is compressed without any loss in quality.

The FLAC license is as shown below.

This is an internationally standardized audio data compression scheme, using the "MPEG-1" video compression standard. It compresses the data volume to about one eleventh its original size while maintaining sound quality equivalent to a music CD.

### **MPEG (Moving Picture Experts Group), MPEG-2, MPEG-4**

These are the names for digital compression format standards used for the encoding of video and audio. Video standards include "MPEG-1 Video", "MPEG-2 Video", "MPEG-4 Visual", "MPEG-4 AVC". Audio standards include "MPEG-1 Audio", "MPEG-2 Audio", "MPEG-4 AAC".

### **WMA (Windows Media Audio)**

This is the audio compression technology developed by Microsoft Corporation.

WMA data can be encoded using Windows Media® Player.

To encode WMA files, only use applications authorized by Microsoft Corporation. If you use an unauthorized application, the file may not work properly.

### **Sampling frequency**

Sampling involves taking a reading of a sound wave (analog signal) at regular intervals and expressing the height of the wave at each reading in digitized format (producing a digital signal).

The number of readings taken in one second is called the "sampling frequency". The larger the value, the closer the reproduced sound is to the original.

### **Bit rate**

This expresses the read amount per 1 second of video/audio data recorded in a disc. A larger number means higher sound quality, but also means a larger file size.

## ■ Network

### AirPlay

AirPlay sends (plays) contents recorded in iTunes or on an iPhone/iPod touch to a compatible device via the network.

### WEP Key (network key)

This is key information used for encrypting data when conducting data transfer. On this unit, the same WEP key is used for data encryption and decryption, so the same WEP key must be set on both devices in order for communications to be established between them.

### Wi-Fi®

Wi-Fi Certification assures tested and proven interoperability by the Wi-Fi Alliance, a group certifying interoperability among wireless LAN devices.

### WPA (Wi-Fi Protected Access)

This is a security standard established by the Wi-Fi Alliance. In addition to the conventional SSID (network name) and WEP key (network key), it also uses a user identification function and encrypting protocol for stronger security.

### WPA2 (Wi-Fi Protected Access 2)

This is a new version of the WPA established by the Wi-Fi Alliance, compatible with more secure AES encryption.

### WPA-PSK/WPA2-PSK (Pre-shared Key)

This is a simple authentication system for mutual authentication when a preset character string matches on the wireless LAN access point and client.

### Network Names (SSID: Service Set Identifier)

When forming wireless LAN networks, groups are formed to prevent interference, data theft, etc. These groups are based on “SSID (network names)”. For enhanced security, a WEP key is set so that communication is unavailable unless both the “SSID” and the WEP key match. This is suitable for constructing a simplified network.

## ■ Other

### Pairing

Pairing (registration) is an operation that is required in order to connect a Bluetooth device to this unit using Bluetooth. When paired, the devices authenticate each other and can connect without mistaken connections occurring.

When using Bluetooth connection for the first time, you need to pair this unit and the Bluetooth device to be connected.

## ❑ sqlite 2003.5.7

SQLite Copyright  
 SQLite is in the  
 Public Domain

All of the code and documentation in SQLite has been dedicated to the public domain by the authors. All code authors, and representatives of the companies they work for, have signed affidavits dedicating their contributions to the public domain and originals of those signed affidavits are stored in a firesafe at the main offices of Hwaci. Anyone is free to copy, modify, publish, use, compile, sell, or distribute the original SQLite code, either in source code form or as a compiled binary, for any purpose, commercial or non-commercial, and by any means.

The previous paragraph applies to the deliverable code and documentation in SQLite - those parts of the SQLite library that you actually bundle and ship with a larger application. Some scripts used as part of the build process (for example the "configure" scripts generated by autoconf) might fall under other open-source licenses. Nothing from these build scripts ever reaches the final deliverable SQLite library, however, and so the licenses associated with those scripts should not be a factor in assessing your rights to copy and use the SQLite library.

All of the deliverable code in SQLite has been written from scratch. No code has been taken from other projects or from the open internet. Every line of code can be traced back to its original author, and all of those authors have public domain dedications on file. So the SQLite code base is clean and is uncontaminated with licensed code from other projects.
